Dear Ed:

I am enclosing the report through forty-three weeks along with our quarterly invoice in the amount of $5,000.00.

Everything still seems to be going as scheduled and the animals will very shortly be taken off their painting regime.

As regards to repeating this work, as we have discussed earlier, as you know the most significant thing we have observed is the fact that some of the materials showed the incidence of growth on the back at the same time that the positive control did. Now, of course, we are seeing, more or less, the usual normal development of tumors in this number of mice. We have discussed the possibility of pursuing this work picking just several of the materials only concentrating them to a greater degree and painting each of the three various extraction materials. To run three materials in a similar type test at a higher concentration using each of the three extraction procedures, would again result in

about eleven groups and cost again in the neighborhood of $20,000 to $23,000.

We will be anxious to hear from you in this respect.

Very truly yours,

Phil
